

DIY ISO 27001 WORKSHOPS

Build your ISMS in-house

**Change the complexity of ISO 27001
implementation into opportunity**

www.vitaladvisory.com

Ensuring customers and partners have confidence in your data security is a significant challenge to expanding business. Being

ISO 27001 certified is a trusted means to demonstrate that you have the knowledge, technology and processes in place to protect critical data.

ISO 27001 provides a robust and systematic approach to building information security – however – implementation can be a challenging exercise for any business. This workshop series provides a clear do-it-yourself path to an ISO 27001 Information Security Management System implementation for your organisation.

Vital Advisory offer both face-to-face workshops and live webinars where you'll learn how the components of ISO 27001 build an effective and unified approach to managing risk and information security. We explore how you can prepare the documentary, procedural and organisational elements of ISO 27001 to achieve both certification and your business objectives.

Why Attend the Workshops

- Paced to match implementation phases
- DIY (Do-It-Yourself) Implementation Templates included at no extra cost
- Opportunity to discuss implementation challenges with experts during workshop
- Case study based workshops will balance theory and practical implementation focus
- No prior experience in information security or risk management is required

Why Vital Advisory

- Our trainers are experienced consultants and auditors who regularly deliver professional training sessions on risk and security topics.
- Use “A3 thinking” or “On-a-page” approach to simplify framework implementation
- Our presenters actively contribute to international peak security industry bodies
- We don't sell complex technology-based solutions

It's all about
Improvements
Incremental
or **Revolutionary**

ISO 27001 Implementation and Certification Myth Busters

NO

YES

- It does not cost you 7-figures to achieve ISO 27001 certification
- You do not need to implement all 114 controls before you get certified
- ISO 27001 implementation and certification does not take 12 to 18 months
- You can achieve ISO 27001 certification using our DIY workshop resources

Workshop Formats, Locations and Schedule

Security is a long-term proposition. Develop your in-house capabilities for lasting, effective security management. Vital Advisory's DIY ISO 27001 workshop series will provide you with the skills, and a clear roadmap, to build your Information Security Management System in-house.

Also, included with each workshop are the complete set of presentation materials, workshop exercises, and templates for key documents. Attendees enrolling for the workshops will receive a full example ISMS documentation pack at no additional cost.
